Technology is just another social practice that cannot be divorced from the social institutions in which it is embedded. Thus it also shows that technology can be both part of the problem and part of the solution to COVID19.

### [Can social media affect inequality?](#)

Furthermore, a deeper understanding of social inequalities in health and innovative health technologies is dependent on distinguishing between two perspectives: one perspective focused on individual resource use, which often draws a questionable causal relationship between SES, technology access, and health outcomes, and a perspective focused on mechanisms that are more dependent on social and institutional structure than on individual characteristics. Studies included in our results generally suggest ...

Important positions in society require more training and thus should receive more rewards. Social inequality and social stratification, in the long run, lead to a meritocracy based on ability. Conflict theorists, on the other hand, view inequality as resulting from groups with power and powerful groups. They believe that social inequality prevents and hinders societal progress as those in power repress the powerless people to maintain the status quo. In today's world, this ...

[Inequality Technology And The Social Contract](#)

Social inequality is found in almost every society. Social inequality is shaped by a range of structural factors, such as geographical location, social status, and are often underpinned by cultural discourses and identities defining, for example, whether the poor are 'deserving' or 'undeserving'. In some societies, those that have few social roles and statuses occupied by its members ...

[Digital technology and health inequalities: a scoping review](#)

To understand technology and inequality, focus on wealth. Wealth has shifted since the 1980s from real to financial assets, and away from commodities sectors towards technology and finance. These shifts have tended to increase wealth concentration. Digital technology changes products and services, but how markets and the economy operate. Digital markets are different ...

[Technology and Inequality | MIT Technology Review](#)

The paper examines the relationship between the rapid pace of trade and financial globalization and the rise in income inequality observed in many countries over the past two decades. Using a newly compiled panel of 51 countries over a 23-year period from 1981 to 2003, the paper finds evidence that support a greater impact of technological progress than globalization on inequality.
