Tripwire 's January 2021 Patch Priority Index (PPI) brings together important vulnerabilities from Microsoft, Dnsmasq and Oracle. First on the patch priority list this month are patches for Dnsmasq related to the seven so-called " DNSpooq " vulnerabilities. Dnsmasq is an open-source DNS forwarding application, and systems using this software should patch as soon as possible.

The presence of the open port in netstat is reassuring because a cracker opening a port surreptitiously on a hacked system would likely not allow it to be revealed through this command. Also, the [p] option reveals the process id (PID) of the service which opened the port. In this case, the open port belongs to ypbind (NIS), which is an RPC service handled in conjunction with the portmap service.
